

VEDATHON 2.0 | OPEN INNOVATION TRACK

FocusFlow

An AI productivity assistant that turns a messy to-do list into a realistic, time-blocked day.

Team: [Add team name]

Members: [Add member names]

PROBLEM

The problem: unplanned, overloaded days

Most people start the day with a long, unordered list and no clear sense of what fits in the hours they actually have.

Too much, no order

Tasks pile up in notes, chats and memory. Nothing says what to do first or what can wait.

No sense of capacity

Without durations and a day length, it is easy to plan ten hours of work into an eight hour day.

Plans that fall apart

Hard work lands in low-energy hours, breaks get skipped, and deadlines are noticed too late.

Most to-do apps store tasks. They do not decide what fits, when, or why.

Who it is for

Students

Assignments, exams and projects with different deadlines, all competing for the same evenings and weekends.

Professionals

Meetings, follow-ups and focused work squeezed into one day, with energy that rises and falls.

Freelancers

Several clients, self-set schedules and no manager to say what comes first.

Shared need: type the day as it is in your head, and get back a plan you can follow.

SOLUTION

The solution: brain-dump in, plan out

Illustrative example. Real plans depend on your day length and settings.

Key features

Understands plain text

Splits a free-form list into tasks and strips bullets and numbering.

Reads time in plain words

Finds durations like 45 min, 2h, half an hour, and deadlines like tomorrow or Friday.

Prioritizes

Scores urgency and importance, then groups into Do now, Schedule, Quick win, Defer.

Energy-aware schedule

Places hard work in your sharpest hours, with lunch and breaks built in.

Honest about overload

Shows a capacity meter and lists tasks that did not fit.

Explains every choice

A plain-language reason for each placement, and warnings for missed deadlines.

Plus a focus timer, task checklist, copy / Markdown / print export, and saved settings.

How it works

Everything runs in the browser with rule-based language understanding: no sign-up, no server, and your list stays on your device.

An optional LLM mode for messy or multilingual input is planned as future work.

Interface design

LEFT: NOTEPAD

Type or paste your tasks here...

Day: 9:00-6:00

Lunch: 1h

Build my day

Ctrl/Cmd + Enter

RIGHT: TIME-BLOCKED PLAN

Capacity meter: realistic

Do now

Schedule

Lunch

Quick wins

Focus timer with pause, resume, stop and mark done. Copy, download Markdown, or print the plan.

What makes it different

Typical to-do app	FocusFlow
Stores a list	Decides what fits in your day
Ignores how long things take	Reads durations and estimates missing ones
Treats every hour the same	Puts hard tasks in your sharpest hours
Silent when you overbook	Shows overload and what did not fit
No reasons given	Explains each placement in plain language

No account, no server, private by design.

Build plan: six phases

1 Problem and design

Track, users, requirements, interface layout

2 Language understanding

Tasks, durations, deadlines, task type, titles

3 Prioritization and scheduling

Scoring, groups, energy-aware blocks, overload, reasons

4 Interface and features

Settings, capacity meter, checklist, focus timer, export

5 Quality

Accessibility, responsive, print, testing on real lists

6 Submission

Readme, GitHub Pages, screenshots, demo, portal

Built to be reliable and inclusive

Safe by default

User text is escaped before display; empty input and invalid day length get clear messages.

Accessible

Keyboard focus styles, labels, screen-reader announcements, reduced-motion support.

Works everywhere

Responsive for phones, print stylesheet, tested in Safari and Firefox.

Tuned on real lists

Parsing and scheduling smoke-tested, then refined on real to-do lists from friends.

What comes next

- Optional LLM mode for messy or multilingual input
- Calendar import so meetings become fixed blocks
- Multi-day planning with automatic carry-over
- Learn real task durations from completed work
- Voice input and reminders
- Dark theme

FocusFlow: from a messy list to a day you can actually finish.
